Intersectionality: A Reading List

What is intersectionality? Most references in intersectional scholarship point to Kimberlé Crenshaw's 1991 Stanford Law Review article "Mapping The Margins: Intersectionality, Identity Politics, and Violence against Women of Color" as the initiation of intersectionality as a concept into academia. Crenshaw combines literature on critical race theory to examine antiracist and feminist discourse on women of color as victims sexual violence, arguing that racism and sexism act as mutually interlocking systems of oppression, resulting in a form of disadvantage that affects Black women uniquely at three levels. Structural intersectionality refers to where systems of domination converge; political intersectionality addresses how individuals who identify with multiple subordinate groups may face challenges due to conflicting agendas of political discourse; and representational intersectionality involves a political discourse that acknowledges the significance of other discourses in addition to the power relations that both challenge and strengthen them.

First and foremost intersectionality is a product of Black feminist thought. Any discussion of intersectionality that fails to incorporate this intellectual history lacks a fundamental understanding of its purpose. Intersectionality seems pretty popular lately in mainstream media, politics and activism. Some people have started to critique the concept, often without reference to any of the work cultivated within the field. Such

criticism suggests while interest in intersectionality is starting to pique, knowledge about intersectionality overall appears to be lacking. This reading list will help those interested in discussing intersectionality have a more holistic conversation about the topic.
